Scanning Slides on the HP Scanjet 8200

Use the Transparent Materials Adapter (TMA) on the HP Scanjet 8200 to scan 35mm slides or negatives.

1. Open the scanner slide and remove the TMA cover if it is attached.

2. Click the SCAN PICTURE button on the scanner. It is the second large button in from the left on the front of the scanner. (If a dialog box comes up that asks you which program to use, select HP Scanning software.)

3. You will be asked what kind of media you are scanning. Select Slides from a Transparent Materials Adapter (TMA). Do not click the scan button yet.

4. Remote the negative holder, if present, from the slide holder. (It is a smaller insert that sits in the slide holder.)

5. Place up to three slides into the slide holder, with the front of the slide facing towards you. (Place the slides in the far left of the holder and slide them towards the right.)
6. After loading the last slide, remove the slide light-shield from the top of the TMA, and insert it in the slide holder until it touches the slides. (The slight shield prevents stray light from shining on the scanned image.)

7. Close the scanner lid.
8. In the Scan Picture window, click SCAN.
9. The scanner will perform a low-resolution preview scan. (The first scan can take up to a minute if the bulb is not warmed up.)
10. Select an area within the slides for the final scan. The dotted border can be moved to anywhere within the slides.

11. To resize the image, click the Basic menu at the top. In the right-hand pane, change the Output Dimensions to whatever size you desire. Note that when you change one of the values (Width or Height), the other value will recalculate automatically. This is to ensure that the final image is not distorted or stretched.
12. When you are done making adjustments, click ACCEPT. This will initiate the final hi-resolution scan.
13. A dialog box appears asking if there are more originals to scan. If you have more slides to scan, click Yes, and then perform one of the following steps:
   - Place another slide in the TMA, click New Scan, make adjustments, and then click Accept.
   OR
   - Select another image within the preview window, make adjustments, and then click Accept.

14. When you have finished scanning your items, click No when you receive the prompt for another scan. The images will appear in the HP Photo and Imaging Gallery. You can make further adjustments to the images there.
